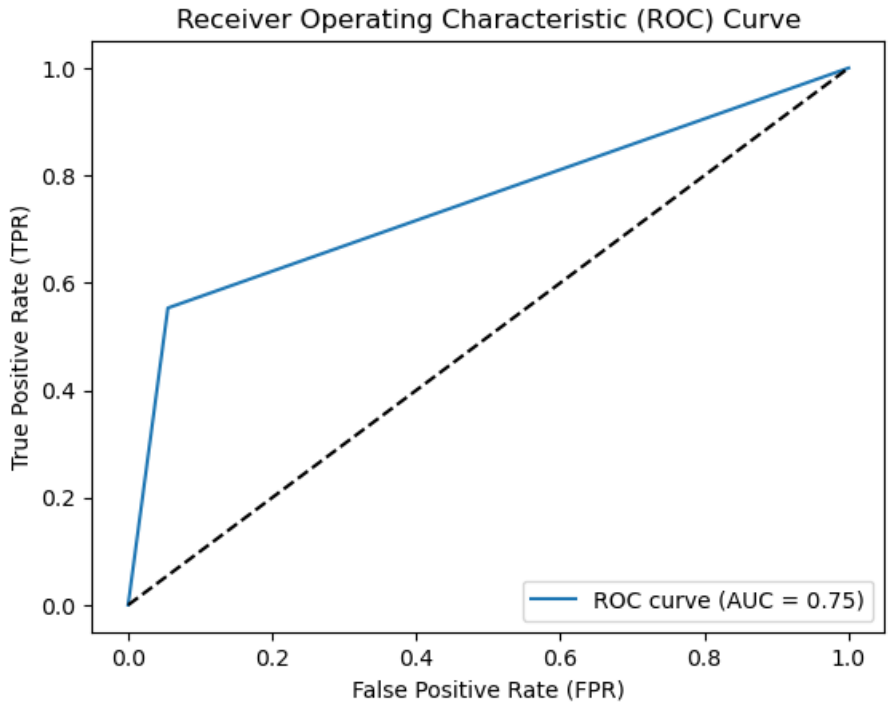
# Plotting the ROC curve
plt.plot(fpr, tpr, label='ROC curve (AUC = {:.2f})'.format(auc))
plt.plot([0, 1], [0, 1], 'k--')  # Random guess line
plt.xlabel('False Positive Rate (FPR)')
plt.ylabel('True Positive Rate (TPR)')
plt.title('Receiver Operating Characteristic (ROC) Curve')
plt.legend(loc='lower right')
plt.show()
```



```
Insight:In the case of AUC = 0.74, the model demonstrates reasonable discriminative ability, but
there is still room for improvement. It correctly ranks 74% of the positive samples higher than the
negative samples, on average, across different classification thresholds. However, it might
misclassify some instances, leading to false positives or false negatives.
